Mohsen Tarassoli

Senior Unity Developer

mohsentarassoli@gmail.com · Tehran, Iran (open to remote or relocation) · mohsentta.github.io/Portfolio · github.com/mohsentta · linkedin.com/in/mohsen-tarassoli

PROFILE

Senior Unity developer with 10+ years shipping mobile and desktop titles, including mini-games that reached **500M+ installs across three live products**. Strongest at two things: modular gameplay systems that drop into more than one host application, and the performance work that keeps them smooth on mobile — asset delivery with **Addressables**, frame-time diagnosis in the **Unity Profiler**, and visuals built in **Shader Graph**. Comfortable owning a feature end to end, from gameplay through UI, animation and the art pipeline.

SKILLS

Unity & C#: gameplay systems, modular architecture, Addressables, Shader Graph, Unity Canvas UI, Unity Profiler

Mobile: Android & iOS, performance profiling, frame-time optimisation, asset loading

Multiplayer: Photon (working knowledge)

Gameplay: physics-based mechanics, game AI, animation integration, UI/UX

Architecture & principles: SOLID, OOP, CQRS, Agile

Data & backend: SQLite, offline sync, REST APIs

Art pipeline: Unity shaders, Photoshop, Maya

Version control & tools: Git, GitHub, GitLab, Azure DevOps, Visual Studio, Jira/Confluence, Miro, Figma, Asana

AI-assisted development: Claude, DeepSeek Harness, LM Studio Bionic

EXPERIENCE

Jungle Frog (Jindo Blue)

Dec 2021 — Jul 2026

Unity Developer · Madeira Island, Portugal (remote)

- Built mini-games shipped inside three live titles — *2 Player Games : the Challenge*, *1 2 3 4 Player Games — Offline* and *Offline Games — No Wifi Games*. Each is banded at 100M+ downloads on Google Play.
- Designed each mini-game as a self-contained modular system, so a single game drops into more than one host application with no host-side changes.
- Worked in shipped codebases using Addressables for asset delivery and the Unity Profiler to track frame-time regressions on device.
- Optimised gameplay mechanics and player-facing interactions alongside the studio's senior developers, across a fully remote team.

Garaj Games

Feb 2021 — Jul 2021

Unity Developer, Technical Artist · Tehran, Iran

- Unity programmer and technical artist on *Mahbanoo*, an adventure hidden-object game set in the 19th-century Middle East.
- Owned gameplay and UI/UX development in C# and Unity, plus asset creation with Shader Graph, Photoshop and Maya.

Lazy Samurai

Dec 2019 — Oct 2020

Unity Developer · Austin, Texas, USA (remote)

- Ran live-ops on *Floodia*, a soft-launched mobile title — smooth updates and minimal downtime.
- Handled animation importing, gameplay development and UI development.
- Integrated API requests to extend in-game functionality.

FuSoft

Oct 2018 — Nov 2019

Unity Application Developer · Tehran, Iran

- Developed a story-reading Unity application with interactive elements, using CQRS for server-side development.
- Designed and implemented modular SQLite-based systems for offline use and data syncing.
- Created animations and UI components for interactive books and audiobooks.

Independent — self-employed

May 2013 — Dec 2017

Game Developer

- Built two 2D Android games end to end — design, programming and asset creation.
- Optimised performance and asset loading for mobile; one game passed 150K active installs.

EDUCATION

National University of Skill (NUS), Iran

2014 — 2020

Bachelor's in Computer Software Engineering

Final-year project: an Android mobile game covering game development, UI design and performance optimisation. Coursework focused on software development, programming and engineering principles, with practical work in Unity and C#.

Shipped titles, project breakdowns and gameplay video: mohsentta.github.io/Portfolio
